

#### FOR IMMEDIATE RELEASE

# INNOPHOS HOLDINGS, INC. REPORTS FOURTH QUARTER AND FULL YEAR 2008 RESULTS

**CRANBURY, New Jersey – (February 9, 2009) –** Innophos Holdings, Inc. (NASDAQ: "IPHS"), a leading specialty phosphates producer in North America, today announced its financial results for the fourth quarter and full year 2008.

#### **Fourth Quarter Results**

- Net sales for the fourth quarter 2008 were \$216.4 million, an increase of \$72.5 million, or 50%, as compared to \$143.9 million for the same period in 2007. Selling price increases had a positive impact on revenue of 98% or \$141.4 million that occurred across all product lines. Volume and mix impacts on revenue had a negative impact of 48% or \$68.9 million that occurred across all product lines, but most notably in STPP & Other Products due to a temporary drop in demand for granular triple superphosphate (GTSP) fertilizer co-product and limited reformulation in detergents using STPP. Volume was also lower in both the United States and Mexico in Specialty Salts & Specialty Acids primarily due to reduced demand in some technical applications and also lower in the United States for technical grade Purified Phosphoric Acid.
- Operating income for the fourth quarter 2008 was \$69.4 million, an increase of \$63.0 million, or 985%, versus \$6.4 million for the comparable period in 2007. Included in the 2008 fourth quarter results was a charge of \$1.9 million dollars related to the write-down of on hand GTSP fertilizer inventories. In the fourth quarter of 2007, Mexico incurred approximately \$10.5 million of planned and unplanned outage costs and associated lower margins from lost production and sales.
- Depreciation and amortization for the fourth quarter 2008, excluding deferred financing amortization expense, was \$12.1 million, a decrease of \$0.9 million compared to \$13.0 million for the fourth quarter of 2007.
- Net interest expense for the fourth quarter 2008, including deferred financing amortization expense, was \$8.2 million, a decrease of \$0.7 million versus \$8.9 million for the comparable period in 2007.
- Tax expense for the fourth quarter 2008 was \$5.3 million, an increase of \$4.0 million versus \$1.3 million for the comparable period in 2007. The low effective tax rate of 9.2% for the current quarter is due to a \$14.4 million or \$0.66 per share benefit from the utilization of net operating losses and the partial reversal of valuation allowances against U.S. Federal net deferred tax assets. Management has concluded that a full valuation allowance is no longer needed as a result of expected profitability in the United States.

- Net income for the fourth quarter 2008 was \$52.3 million, an improvement of \$56.2 million compared to a loss of \$3.9 million for the same period in 2007.
- Diluted earnings per share for the fourth quarter 2008 were \$2.40 compared to a loss of \$0.19 for the fourth quarter of 2007.
- As of December 31, 2008, Innophos had \$125.3 million of cash and cash equivalents. Net debt at the end of the fourth quarter 2008 was \$257.2 million, similar to the \$259.9 million at September 30, 2008, as Innophos made significant estimated tax payments in the fourth quarter. There were no borrowings under the Company's revolving credit line at December 31, 2008. Capital expenditures for the fourth quarter 2008 were \$5.3 million, the same level as the fourth quarter 2007.

Randy Gress, CEO of Innophos, commented on the results, "With quarterly operating income and net income of \$69.4 million and \$52.3 million respectively, our results were solid despite the lack of demand for fertilizer and the softening of demand for other products at the lower end of our product portfolio. These changes were due in part to the worsening of overall economic conditions through the quarter and in part to increased competition. In response, we are taking a more aggressive stance to maintain our leading market position and invest in and grow our more profitable businesses going forward. We are also making adjustments and improvements in our operations to optimize our cost base and better position ourselves for the challenges and uncertainties of 2009. We will strive to maintain the vital relationships we have developed with customers who look to our customer service, product reliability and quality, proprietary technology and supply chain efficiencies to help ensure the quality and consistency of their own products."

#### Segment Results 4Q 2008 Versus 4Q 2007

#### **United States**

- U.S. year on year quarterly net sales increased 55% due to higher prices across all
  product lines, most notably in Specialty Salts and Specialty Acids, which exceeded
  lower volumes across all product lines, most notably in Purified Phosphoric Acid.
  Technical grade applications accounted for approximately 60% of the volume
  decline.
- Operating income increased by \$44.2 million from \$1.5 million in the fourth quarter of 2007 to \$45.7 million in the fourth quarter of 2008. This improvement was driven by higher selling prices and lower manufacturing fixed costs which exceeded effects of unfavorable sales volume and mix and higher raw material costs.

# <u>Mexico</u>

 Net sales increased 46% versus the comparable quarter of 2007 due to significantly higher prices across all product lines which exceeded lower volume and mix effects on revenue. STPP and Other Products accounted for most of the volume and mix declines primarily due to reduced demand for GTSP fertilizer co-product and limited reformulation in detergents using STPP. • Operating income increased by \$21.6 million, from \$3.4 million in the fourth quarter of 2007 to \$25.0 million in the fourth quarter of 2008, driven by higher selling prices and lower manufacturing fixed costs which exceeded the effects of unfavorable sales volume and mix and higher raw material costs. Included in the 2008 fourth quarter results was a charge of \$1.9 million dollars related to the write-down of on hand GTSP fertilizer inventories. In the fourth quarter of 2007, Mexico was affected by the previously noted outage costs and lower margins.

#### <u>Canada</u>

- Net sales increased 37% versus the same quarter in 2007 due to higher selling prices across all product lines which exceeded lower volume and mix effects on revenue across all product lines.
- Operating income decreased by \$2.8 million from \$1.5 million in 2007 to a loss of \$1.3 million in 2008 due to the effects of unfavorable sales volume and mix and substantially higher raw material costs which exceeded higher selling prices.

#### **Full Year Results**

- Net sales in2008 were \$934.8 million, an increase of \$355.8 million, or 61%, as compared to \$579.0 million for 2007. Selling price increases had a positive impact on revenue of 83% or \$480.3 million that occurred across all product lines. Volume and mix impacts on revenue had a negative impact of 22% or \$124.5 million that occurred mostly in STPP & Other Products due to reduced demand for granular triple superphosphate (GTSP) fertilizer co-product and limited reformulation in detergents using STPP. Strong demand and efforts to grow the Specialty Salts & Specialty Acids business in 2008 resulted in a positive volume and mix impact, while unfavorable volume and mix impacted Purified Phosphoric Acid in 2008 compared to 2007.
- Operating income for the full year 2008 was \$295.7 million, an increase of \$248.0 million, or 520%, versus \$47.7 million for 2007. In 2007, Mexico incurred \$13.9 million of negative impacts related to outages, lower margins from lost production and sales, workforce reorganization and port tax settlement charges, while the U.S. incurred \$6.3 million of unusual expense resulting from the Company's termination of its pharma sales agency agreement with Rhodia, Inc. as part of internalizing that business.
- Depreciation and amortization for the full year 2008, excluding deferred financing amortization expense, was \$52.5 million, an increase of \$5.0 million compared to \$47.5 million for the full year of 2007.
- Net interest expense for 2008, including deferred financing amortization expense, was \$34.2 million, a decrease of \$7.4 million versus \$41.6 million for 2007.
- Tax expense for the full year 2008 was \$58.7 million, an increase of \$46.8 million versus \$11.9 million for 2007. The low effective tax rate of 22.7% for the current year is due to a \$24.9 million or \$1.15 per share benefit from the utilization of net

operating losses and the partial reversal of valuation allowances against U.S. Federal net deferred tax assets.

- Net income for 2008 was \$200.5 million, an improvement of \$206.0 million compared to a loss of \$5.5 million for 2007.
- Diluted earnings per share for 2008 were \$9.23 compared to a loss of \$0.27 for the full year of 2007.
- Capital expenditures for 2008 were \$18.5 million compared to \$28.4 million in 2007 when the company was investing in the cogeneration project completed in March 2008 at its Coatzacoalcos facility.

Randy Gress said, "We are pleased that 2008 was an exceptional year. At \$296 million our operating income was over 500 percent greater than 2007, and our net income improved by over \$200 million from a net loss in 2007. A number of conditions came together in the markets in which we participate: strong demand in our end markets, positive competitive dynamics and lagging raw materials pricing from our contractual supply arrangements. As a result, we have been able to continue to meet our delevering goals, decreasing net debt while paying a dividend, while continuing to focus on greater efficiency and growth in our higher-margin, more stable businesses. With net debt down to \$257 million, we have significantly strengthened our balance sheet and are in an excellent liquidity position to make required 2009 bank debt payments. We have been focused since 2005 on moving Innophos out of a highly leveraged position. We expect to continue further deleveraging during 2009 by concentrating on free cash flow generation."

#### Segment Results Full Year 2008 Versus Full Year 2007

#### **United States**

- U.S. year on year net sales increased 49% due to higher prices across all product lines, most notably in Specialty Salts and Specialty Acids, which exceeded lower volumes in Purified Phosphoric Acid and STPP and Other Products. Demand for Specialty Salts & Specialty Acids was strong for 2008 and resulted in a positive volume and mix impact.
- Operating income increased by \$105.4 million from \$3.3 million in the full year of 2007 to \$108.7 million in 2008. This improvement was driven by higher selling prices which exceeded the effects of unfavorable sales volume and mix, higher raw material costs and higher fixed costs. In 2007, the U.S. incurred \$6.3 million of unusual expense resulting from the Company's termination of the pharma sales agency agreement.

#### Mexico

Net sales increased 84% versus 2007 due to significantly higher prices across all
product lines which exceeded lower volume and mix effects on revenue. STPP and
Other Products accounted for most of the volume and mix declines primarily due to

reduced demand for GTSP fertilizer co-product and limited reformulation in detergents using STPP.

Operating income increased by \$140.6 million, from \$39.8 million in 2007 to \$180.4 million in 2008, driven by higher selling prices which exceeded the effects of unfavorable sales volume and mix and higher raw material costs. For 2007, Mexico incurred \$13.9 million of negative impacts related to outages, lower margins from lost production and sales, workforce reorganization and port tax settlement charges.

#### Canada

- Net sales increased 32% versus 2007 due to higher selling prices across all product lines which exceeded lower volume and mix effects on revenue across all product lines.
- Operating income increased by \$1.9 million from \$4.6 million in 2007 to \$6.5 million in 2008 due to higher selling prices which exceeded the effects of unfavorable sales volume and mix and higher raw material and manufacturing fixed costs.

#### **Recent Trends and Outlook**

Raw Material Costs

Market prices of phosphate rock, sulfur and sulfuric acid, the primary raw materials used in the production of specialty phosphates, increased substantially during the first three quarters of 2008 due to high phosphate fertilizer demand. During the fourth quarter of 2008, as demand for phosphate fertilizers collapsed, the market price of sulfur decreased rapidly, and recently the market price of phosphate rock has also begun to decrease.

Innophos purchases phosphate rock, sulfur and sulfuric acid for Mexico and has long term raw material supply contracts in the United States whose pricing is determined in part by phosphate rock and sulfur market prices. Based on current and 2008 market price levels for phosphate rock and sulfur, Innophos' overall 2009 U.S. cost structure is expected to remain substantially unchanged from fourth quarter 2008 levels.

Due to phosphate rock pricing uncertainty for Mexico, weakness in the markets served by those operations, and some loss of traditional business, Innophos anticipates operating its Coatzacoalcos plant at significantly reduced levels during 2009. In addition, Innophos also built considerable raw material inventory at the end of 2008. As a result of these factors, increases in phosphate rock cost will not begin to affect financial performance adversely until mid-second quarter of 2009. Assuming sulfur market prices in Mexico remain at current levels and phosphate rock prices reflect the upper range management has determined to be reasonably possible outcomes of the rock arbitration proceedings discussed below, Innophos' raw material costs for Mexico could then increase by approximately \$20 million per quarter at approximately 50% of capacity operations. Overall, therefore, Innophos expects its first quarter 2009 cost structure, in the United States, Mexico, and Canada to be substantially similar to the fourth quarter of 2008.

#### Selling Prices

Historically, Innophos has successfully recovered raw material, energy and other cost increases through price increases. Fourth quarter 2008 represented a 98% increase compared to fourth quarter 2007, after a series of price increases that were implemented throughout 2008. However, current softening demand due to the global recession and increased competition primarily from Chinese and European firms are causing downward pressure on selling prices. Management expects to deal with these increased pressures in all segments by maintaining a competitive offering through continued focus on enhanced service, Innophos' proprietary technology, and the overall value the Company provides to its customers.

#### Volumes

Volumes in the U.S. were lower in the fourth quarter due to overall economic slowness, particularly in accounts exposed to agricultural and industrial markets. In addition, competitive pressure from European and Chinese producers increased as they sought to gain access to the U.S. market as their home market demand slowed. Finally, Innophos has seen a modest amount of reformulation (that is, changes in customer product composition) due to 2008 record prices. The Company expects these pressures to continue in 2009.

Volumes in Mexico for 2009 are expected to be affected more severely by the lack of demand in the fertilizer market, greater competition, especially for export business. reformulation and recession. Innophos' largest Mexican customer, for which Innophos historically supplied purified phosphoric acid, recently lost significant STPP business due to a combination of reformulation and lost share. In January 2009, the customer closed one of its three plants estimated at more than half its STPP capacity and is expected to greatly reduce its phosphoric acid purchases. Based on current circumstances, management estimates this could translate into a 2009 revenue loss of approximately 5% to 10% of historical total Company sales and an annual consolidated operating income reduction of approximately \$6 to \$16 million based on pre-2008 historical profitability and depending on management's success at mitigation efforts. Innophos anticipates supplying approximately 35% of this customer's historical guarterly volumes in the first quarter 2009 and is working with this customer to support its reduced operations by focusing on increasing Innophos' overall share with this account, including marketing other products to the customer. Management is reducing manufacturing costs across the whole site and is considering several options for the longer term, including seeking new customers for Innophos' Mexican purified phosphoric acid capacity to increase the Company's diversification of end markets and customers, or with reasonable investment levels, using the capacity to supply the U.S. operations. To support these efforts, Innophos is investing to upgrade the majority of its technical grade purified acid capacity to food grade capability. Management anticipates this investment will be completed by the end of 2009.

Innophos' purified phosphoric acid supply chain includes production at its Coatzacoalcos, Mexico and Geismar, LA complexes along with purchases from a third party at Aurora, NC. Innophos' supply of purified phosphoric acid from Aurora, NC is being partially disrupted due to an announced temporary shutdown in part of that complex from lack of phosphate fertilizer demand. Innophos is responding by operating its Geismar, LA acid purification complex at full capacity and expects that the Company will be able to meet its current operating and supply plans.

Finally, due to greatly depressed Latin American phosphate fertilizer demand, Innophos Mexico expects to have minimal sales of GTSP in the first quarter 2009. However, Innophos volumes are small relative to the market, and Innophos expects the reappearance of South American demand in the second quarter 2009.

#### Operations Outlook

Innophos is currently expecting that its U.S. specialties business will perform well in the first quarter of 2009. While demand has been affected by the recession, Geismar-supplied purified acid is cost effective in today's marketplace, and product selling prices are now at historically high levels. During 2009 management expects to continue to respond as needed to the increase in overall market competitiveness in order to maintain Innophos' market position in this business.

In the first half of 2009, management anticipates operating Innophos' Mexican facilities at reduced levels of capacity in response to the combination of factors noted above adversely affecting prices and volumes. The level of operations will be dictated by Innophos' ability to develop and sustain profitable business in Mexico. In response to anticipated cost increases in raw materials, the Company remains focused on running efficiently and reducing costs, particularly in its manufacturing operations. Innophos is benefiting from declining sulfur, energy and transportation costs, and management expects to continue to operate in a manner that optimizes business performance while mitigating uncertainties, particularly as regards phosphate rock price.

Management has scrutinized its planned capital expenditures for 2009 and expects to focus 2009 capital investments on essential projects that maintain the flexibility and efficiency needed in the current dynamic market environment. For example, Innophos is continuing with the expansion and upgrade of its Chicago Heights facility, which is critical to the growth of the pharmaceutical and nutraceutical excipient product line. Management now projects Company-wide 2009 capital expenditures to approximate \$20-25 million, in line with historical levels. This amount includes the investments being made to upgrade the Mexican phosphoric acid purification plant.

#### Earnings Outlook

Considering the uncertainty around Mexican phosphate rock cost and operating levels, softer overall demand, greater competition and concern about the overall economic climate, management believes that reliable, specific operating income guidance cannot be provided for the full year 2009. On a sequential basis, management currently expects first quarter 2009 volumes to be off approximately 15% from fourth quarter 2008 levels, due to reduced demand and factors previously noted. First quarter 2009 selling prices are expected to be similar to those in the fourth quarter 2008, and the Company expects its first quarter cost structure to remain similar to that of the fourth quarter. Looking beyond the first quarter of 2009, however, volume impacts are uncertain and dependent on the depth of the recession. Selling prices are expected to trend down, and cost structure increases due to increased phosphate rock costs will impact Mexico starting in the second quarter of 2009.

#### Legal Items

In December 2008, Innophos initiated binding arbitration with OCP, its sole supplier of phosphate rock for Mexico, concerning pricing terms for 2008 and 2009 under the Company's agreement with that supplier. A panel of three arbitrators has now been selected to hear the case, interpret the pricing provisions of the contract, and derive the rock price for both years. Absent agreement on an expedited process, which the Company is seeking, Innophos has been advised that a final decision could take up to a year. In preparing the Company's disclosures concerning 2009 phosphate rock cost increases for Mexico, the Company has utilized rock price assumptions that are at the upper end of the range of what management has determined to be reasonably possible outcomes of the arbitration process.

As previously reported, the Environmental Protection Agency asserted in 2008 that Innophos' Geismar, LA purified phosphoric acid plant and the neighboring third party plant supplying raw material green phosphoric acid to Innophos do not qualify for certain recognized exemptions from hazardous waste regulations, and referred the matter to the U.S. Department of Justice for civil enforcement. Innophos has consistently asserted that its operations qualify for exemptions and otherwise are in full compliance with applicable regulations. Since the time the case was referred to DOJ, Innophos entered into discussions with the government parties in an effort to resolve the matter, which discussions are continuing. During the fourth guarter of 2008, the DOJ/EPA demanded that Innophos and its neighboring interconnected supplier undertake two "interim measures" to address DOJ/EPA's chief environmental concerns. The Company and its neighboring interconnected supplier have initiated joint technical discussions. The Company has determined that it is probable that one of the process modifications will need to be undertaken in the next several months, under an agreement to be reached with DOJ/EPA, and probable that the capital expenditure and future operating expense of that modification will not be material. The second interim measure sought by DOJ/EPA does not have a readily available technology solution. Even though the companies believe they are operating in full compliance, they have begun substantial technical work in an attempt to develop a feasible approach that may address DOJ/EPA's concerns. It is not known if these technical efforts will be successful or whether this matter will be settled with DOJ/EPA or will require litigation to resolve the dispute.

#### **About Innophos Holdings, Inc.**

Innophos Holdings, Inc. (www.innophos.com), the holding company for a leading North American manufacturer of specialty phosphates, serves a diverse range of customers across multiple applications, geographies and channels. Innophos offers a broad suite of products used in a wide variety of food and beverage, consumer products, pharmaceutical and industrial applications. Innophos' market-leading positions derive from its experience and dedication to customer service and innovation. Headquartered in Cranbury, New Jersey, Innophos has manufacturing operations in Nashville, TN; Chicago Heights, IL; Chicago (Waterway), IL; Geismar, LA; Port Maitland, ON (Canada); and Coatzacoalcos, Veracruz and Mission Hills, Guanajuato (Mexico). # **Additional Information**

Net debt is a supplemental financial measure that is not required by, or presented in accordance with, USGAAP. The Company believes net debt is helpful in analyzing leverage and as a performance measure for purposes of presentation in this release. The Company defines net debt as total debt less cash and cash equivalents.
